00:00:00 - Craig Muirhead (nsnconstructionnw@gmail.com)
Sorry, I'm bringing you down to the screen where I can see you like a normal human. How are you? Yeah, I'm good.
00:00:05 - Angela Brunson
Thank you. How are you doing? I'm good. Where are you located?
00:00:08 - Craig Muirhead (nsnconstructionnw@gmail.com)
You sound like you're in England. Yeah, I'm from the UK, but I actually live in Spain, but I'm back in the UK right now.
00:00:15 - Angela Brunson
Oh, cool.
00:00:17 - Craig Muirhead (nsnconstructionnw@gmail.com)
So I live in Mallorca. Wow, it sounds very interesting. Which a bit nicer at this time of the year than the UK is. And you're in California?
00:00:28 - Angela Brunson
Yeah.
00:00:30 - Craig Muirhead (nsnconstructionnw@gmail.com)
Good, good, good. It looks cold.
00:00:32 - Angela Brunson
I thought California was quite warm. It's freezing and the wind is howling. It is so scary. I've never felt the house shake this much.
00:00:41 - Craig Muirhead (nsnconstructionnw@gmail.com)
Goodness. Yeah, we were supposed to get a storm yesterday, but it never came. So I'm only here today and then I leave back to Spain tomorrow. And so hopefully that storm is gone and the flights are all running as normal. So thanks for putting the time aside. much, it I know. And for this call, and also for the last couple of days, you've been putting some time aside for the training.
00:01:05 - Angela Brunson
How have you found the free training? Um, a bit of a commercial at times. I really honestly, I don't care how good everybody else is doing. I think that's something that I mean, other than in my series, there are certain people where I look at them and I think, you know, I do the comparisons, but it's such a separate world in this hobby I have from, I'm a MotoGP fan and I follow some Red Bull rookies and whatnot, but like, I don't really care how great they think you are because they're different. Yeah, yeah, you are right.
00:01:50 - Craig Muirhead (nsnconstructionnw@gmail.com)
Everybody does think they're different, but it's amazing how similar everybody is from my side. Everybody's got virtually the same, the same issues. It's just...
00:02:03 - Angela Brunson
I think it would have been nice to see the low level people like myself and maybe some of the testimonials. You know, it's not just working for Red Bull Rookie Cup kids. It's working for people who have a full time job and just do this for fun and still want to see improvements, but don't necessarily need to feel like, you know, you can improve at my level, but you can also improve when you're an Olympic athlete and still.
00:02:32 - Craig Muirhead (nsnconstructionnw@gmail.com)
It is a small percentage that are making it a living, if you like, but it generally, testimonials tend to cascade down. So if you're racing in British super bikes, for argument's sake, and you show somebody on a, you know, an R3 in, you know, who's 14, then they're going to go, well, that he's not dealing with. So I absolutely take on board what you're saying, and maybe a bit of a mix would be better as well.

00:03:06 - Angela Brunson
Yeah, I think it would have resonated with me to see someone in the minor leagues who just does this to try to have fun. And hearing them say how much it's helped, like, I mean, I was able to kind of put it aside and realize, look, if it's working for MotoGP kids, it's going to work for me too. But I think it would have called out to me more, you know, I agree with that. I think there's a whole market there to tap into because, you know, there's only a few of those elites that, you know, it could almost be off-putting, right? Just, oh, this is, you know, like, I think one of my last comments was, I hope this isn't just for Red Bull Rookie Cup wannabes because I'm old enough to be their grandma, you know? And it just sort of feels like maybe this, maybe I'm not welcome in the world of trying to get to the 12%, you know? you. Which I know that's not your intention, but I just worry that there's a way of interpreting it as such.
00:04:06 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah, you're absolutely right. What I'll do is I'll send you, after this call, a page of testimonials which does cross all the way across from people that are doing it, you know, at all ages. And, you know, I've got, you know, 60-somethings that are applying what we're talking about, you know, so it's not designed for a certain sector. But I do take those points on board. So the idea of today really is a bit of fact-finding, some fact-finding from my side, because you've done some assessments, which is great. It gives me a view, but then obviously to see exactly where you are, and even if what I do actually helps or not, that's the first thing. And then, also some fact-finding. And then from your side as well, because all you've seen is a pre-recorded, you know, set of videos so far. And then if we do think it's a good fit, if we think it is the right thing that both of us should be doing, we'll go away, have a day or two to think about it, and then come back to re-engage on the next steps.
00:05:19 - Angela Brunson
How does that sound? Yeah. Yeah, that sounds great.
00:05:22 - Craig Muirhead (nsnconstructionnw@gmail.com)
Okay, great.
00:05:23 - Angela Brunson
Yeah, I have a race weekend coming up the 16th, 17th, or 17th, 18th.
00:05:28 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yes, yeah, the next CVMA, yeah, yeah. Right. Okay, so maybe you could start by telling me why you decided to book a call, because you could have got to the end of that training and go, yeah, that's all very interesting, thanks a lot.
00:05:43 - Angela Brunson
But you thought, no, I want to book a call. So why was that? Because I am really intrigued. I do, what resonated with me was more about, like, what's on the inside than the modifications and the throwing. right.
00:05:59 - Craig Muirhead (nsnconstructionnw@gmail.com)
Thank
00:06:06 - Angela Brunson
I've been through so many different types of sporting events and competitions, and I've seen the people who are like, well, I, of course, I didn't win. I was breaking in a new pair of socks or, you know, or the really plump people who were trying to save weight by spending $3,000 on I on carbon sprockets or whatever for their mountain bikes or their bicycles. And meanwhile, they're stuffing their face with clip bars or, you know, so I get, I understand that I'm not that person. And I realized that all those external factors are just not relevant. And I've definitely thrown money at bikes and suspensions and suspension coaches and the schools and the different . And that just what really resonated was, you know, stop with the externals and start on the internals. Because

people have always joked with me when you talk about like how a race went, they're like, you know what you should do? Well, don't do it, but think about it. You should probably just take a shot of tequila before you get on the bike. Something to just sort of quiet the nonsense and let you relax. And as tempting as it is, I've never done it. But, you know, you start to hear those same types of things about it's what's on the inside from your external friends, you know, and your fellow racers. And it's like, that's the hardest thing I think it is going to be to change. It's easy to pull money out of a savings account and buy a new bike. I mean, it sounds hard, but it's easy, I think, as opposed to reprogramming, really, is what I think I need.
00:07:55 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah, no, I absolutely agree. And, you know, the whole point of that education. You know, three days really is to get us to realize that the actual performance comes from within. And because, yes, you may get, you know, a 2026 X, Y, Z might be nicer to ride and have some, some whiz bang elements, but the real differentiator comes from, it comes from yourself. And that's about you understanding, because we're self-taught to ride a bike, first and foremost, and then we're self-taught, or I think you taught your boyfriend, and yeah, I was reading in one of your things, and then we're self-taught how to go racing, and how to deal with the stresses and the strains of racing. So everybody's literally finding their own way to do it, and everyone's an expert in the paddock, everyone's an expert on what you should do, or what you could do, or what you, what, you know, what the answer is, but the truth is, you know, that there is a... When you look at the neuroscience, there is a time when we are, you know, we're stressed, we're tight, we're trying to force it to fit, and that can work in other parts of our life, you know, where you've got just the willpower to get to the finishing line. But in performance, it's actually sort of like your kryptonite, because the cool, calm, collected space that you need to be in is actually where you're doing less and achieving more. And then you go, I can't believe how fast it was and how much fun it was, which is what we weren't racing for in the first place. So it's all about trying to strip away all of those extra stresses and strains that sort of pile on top, and then just focusing on a few vital things that actually make, you know, move the needle and make the difference. So, but the problem is, it's guesswork, and so we know what that, that's... That process is really, you know, as far as that's concerned. So that's, that's great. It gives me, it gives me some, some insights on, on how you're, you're feeling going into this call. And what would you say are your top two or three struggles you're facing at a race weekend?
00:10:19 - Angela Brunson
I think I'm just beaten down with a general lack of confidence. And just like, I think I said something about how I have that attitude going into the weekend and throughout of keeping those expectations low, just be a participant, and then you won't be disappointed. You might be pleasantly surprised if you go a little faster, or if you just stay the same pace sometimes is what, what makes me happy, which is, you know, sad state of existence when it comes to this. And it's just so different than everything else I've experienced in life where, you know, like, I almost miss the days when I was a beginner on a Ninja 250. When every time you're on the bike, you're improving because you're just brand new. And like, it's like anything marathon running, you know, you rock climbing, you get to a point where you just, you see just incrementally smaller improvements and plateau. And then you have these breakthroughs every now and then. And those haven't happened in such a long time for me that it's really come to the point of, should I just be done with this? And save money and take up knitting or, you know, move somewhere where it's just not even an option of something I could spend my time doing and, you know, replace it with something else completely. I've always liked things that I thought were hard. Like I've run probably 45 or 50 marathons and ultra marathons. And when someone said, you should try racing, because I've been a rider for a while. But, um, I immediately thought, Oh God. I that

sounds hard. And then I was like, wait a minute. I do things that are hard and I excel at them. And I hate people who are like, no, I don't want to try that. And you haven't even tried.
00:12:13 - Craig Muirhead (nsnconstructionnw@gmail.com)
How do you know?
00:12:14 - Angela Brunson
So I didn't want to be one of those people that just poo-pooed the idea of doing something without giving it a go. And of course, back in the Ninja 250 days when I was one of the only girls at the track, everything was an achievement. You know, the attention, the, like, just the absorbing the knowledge, just like any of the other activities I've participated in. And that thrill, I guess you could say, carried me for a long time, got me to three championships. And I'm, this is my, I've done three back to back championships in a row. And going into this, this will be the fourth year where I have that target on my back. And I'm seeing the girls that I've beaten. for And get For the past three years, get faster, you know, and I've changed a bike, and it didn't work, it did not, like I'm half, I think we have seven rounds, coming up is round four, so I'm almost, I'm about at the halfway point, and the one good thing I've done is, when I bought the bike before the season started, I told myself, if this bike doesn't work, you know, it's obviously, it's not the bike, it's you, right? So, figure that, because I had struggled for three seasons in a row on a 300, just, it just wasn't right, I went from the 250, feeling great, getting faster, kind of maxed out my abilities on that bike, the 300 was just a major setback, and that was three seasons of suspension mods, and seat height adjustments, and welding plates to get my pegs to go higher, or more forward, or backwards, and every round for seven, seven rounds for three. And so I learned, and then I got on the 400 and I had that Goldilocks just right, you know, things really made big improvements. And it was great because every now and then you make an improvement like converting to that 415 chain and the lighter sprockets, and you're already on a roll. And maybe you attribute, you know, more improvements, like you start to think, oh, maybe that wasn't me. That was the 415 conversion, right?
00:14:30 - Craig Muirhead (nsnconstructionnw@gmail.com)
yeah.
00:14:31 - Angela Brunson
And so, because he's on the Aprilia 660 and he's doing great, we thought last season, during the off season, thought, wouldn't it be fun if I was on the Aprilia 457, which is like a baby 660. Yeah. And we'll both be, you know, a team Aprilia people. And so, fast forward, you know, a few off season track days, putting the race body on it, blah, blah, blah. It has been miserable. Like, I think I'm anywhere. We from 8 to 12 seconds, way off pace. And other people have ridden the bike who are faster than me, and they're heavier than me. They've dragged my belly pan because that's how much weight they're putting on it compared to me. And they're going a good 10 seconds faster than me on that bike. And so now I hate that bike. And so I just picked up a Ninja 500. And when I sat on it, it was like that, oh, this is just right, like the 400. Now, haven't taken it out on the track, so this round, I still have to finish a few things, like the rear set. You know, like I bought it from like an auction, basically. So it has, it's been broken in, and then I've converted it to a race bike. So there's a lot, there's a little bit more work to do before the race weekend. But just riding it up and down the street from the cellar. Yeah.
00:16:00 - Craig Muirhead (nsnconstructionnw@gmail.com)
It was like, oh, yeah, this is your home. You feel like your home? Well, I used to work for Aprilia, actually, many moons ago, but Aprilia obviously is very and it's sort of the far edge of a production based bike, you know, almost honed on a on a full product, you know, full prototype, whereas obviously the Ninja, you know, is a is a production bike, which is obviously just got a little bit more, a little bit more room, a little bit more softer in certain areas, you know, more

feedback, whereas the Aprilia movie felt very numb in its feedback for you.
00:16:38 - Angela Brunson
Maybe. I don't know. I'm guessing I think a lot of it, I think had to do with the body work I put on it and it made me sit higher.
00:16:46 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah.
00:16:46 - Angela Brunson
And I'm more of a sit down in, you know, the bike instead of on the bike. And so that, like, I stand five feet, maybe five feet, one flat footed on the ground. And when I sat on the four, five, seven with this body. I think my eyes were like 5'3", you know, maybe an inch or two higher, but it was enough to feel like, oh my gosh, you know, I'm on a skyscraper, yeah, I'm riding a tall building, and that I don't, I'm not a knee-dragger to begin with, and the chances of me ever dragging me from that type of height, just, it was just not confidence-inspiring at all, and it's frustrating, because on paper, it's a 457, you know, it has more cc's, and it should be the cheater bike within my class, because I'm in a class that's anything under 500, 500 cc or less, so now I'm at the ultimate, you know, the highest cc's that I can have legally in this class, and I don't want to, I'm not thinking like, oh, because of this bike, I'm going to be faster, like I'm, that's not my mindset, it has nothing to do with what shocks, or suspension, or, you know, I know that going in.
00:17:59 - Craig Muirhead (nsnconstructionnw@gmail.com)
We're in a field, but The reason why people spend $4,000 on a gold tube suspension is because it feels better. So we're in a feel business. So if you've got a better feel, that's going to help you relax more. And when you relax more, you go faster. So that's important. So this is your fourth season.
00:18:20 - Angela Brunson
How long? This is actually my 10th season.
00:18:22 - Craig Muirhead (nsnconstructionnw@gmail.com)
Oh, sorry.
00:18:23 - Angela Brunson
Your fourth. Yeah. It's just three. The last three have been championship winning seasons. And so this will be my fourth. Like, you know, do I care if there's a target on my back or do I let somebody else, you know, do I want to fight to get a fourth championship? Because it's just a piece of plastic on a shelf. It's not like prize money, you know?
00:18:44 - Craig Muirhead (nsnconstructionnw@gmail.com)
No, no. Yeah. But I, but you'll also not like the feeling of somebody else getting that piece of plastic.
00:18:51 - Angela Brunson
Yeah.
00:18:52 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah. Potentially, you know? Yeah. How long do you think it's been an issue or been holding you back then? Because I thought it was four seasons. So if it's been ten seasons. How long do you think, lack of confidence, feeling beaten down, little or no expectation of progress, how long do you think that's actually been an issue that's been holding you back?
00:19:14 - Angela Brunson
I think at least a year. remember last season not feeling proud about the championship because I hadn't gone any faster. It was just one of those lucky seasons where the girls in my class were newer, less experienced, and actually probably two years now because I really feel like I won the first championship due to just lack of other participants in my class, and then the second

year, there were one or two, but maybe, like I remember the girl that I thought was going to beat me, she didn't come to the April round, and I was like, where is she? And everybody said, oh, she's at prom, you know, she's in high school. Right. And because they make that round worth double points, all I had to do was keep the bike upright and finish at, you know. So, like, honestly, that was kind of a gimme. The first year was a gimme. The second year was a gimme. The third year, I fought really hard for it. And it was just, I had gotten, I think, as fast as I could get on that 400 and won the championship, but didn't feel really proud about it because even though the competition was there, there were girls that were fast. And I just was a little bit faster. I wasn't faster than I had been. I was just a little faster than them, if that makes sense.
00:20:31 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah, yeah, yeah, yeah. So, I mean, you sound really quite aware of how you're feeling and how does it actually show up for you? You know, how does that cost, what does it cost you emotionally when you recognize that your confidence is lacking, or you recognize that there isn't that progress that you've been looking for? How does that manifest itself on a race weekend for you?
00:20:53 - Angela Brunson
I'm fighting dread instead of anticipating and being You know, like, this is my chance to go faster. It's more of like a, I hope I'm not too disappointed when I get on the bike. It's a completely different mindset than I like and I'm accustomed to. And with the sad part is I think I've been feeling it for so long that I've just sort of accepted like, okay, here we go again.
00:21:22 - Craig Muirhead (nsnconstructionnw@gmail.com)
I did like try not to suck. Yeah. Yeah. So, yeah. So it's become the norm. It's become what you, what you're, you know, you don't really expect anything different than that. Yep. Yeah. Which isn't a very, it's not very enjoyable, is it?
00:21:38 - Angela Brunson
No. And I'm, I just worry that, you know, it's so hard to teach an old dog new tricks. Like I'm so programmed into, you know, certain things that have worked in the past. Like when you're brand new on a Ninja 250, everything works, you know. Like a, a raising coach said, we'll try saying entry. At the entry and then saying apex at the apex and then saying exit when you see your, you know, like, so I like to just, I've tried so many things and it's like, well, you get on the bike and you're like, well, I did this last time and the time of four and the time of four, do I bother doing it again? You know, because like you said, repetition and expecting a different result is just the definition of insanity. Right. And I know that. And so I'm just sort of at my wits end as far as, I don't remember what worked, when it worked, because that was such a long time ago.
00:22:30 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah. To be honest, you're not alone there. Most riders do, so they go and have a great weekend, but they've got no idea what contributing factors made that great weekend. So they can't duplicate it. It's just like, oh, right. Okay. I better wear the same undersuit that I wore that day. better wear, you know, Billy was there. So let's make sure Billy's at every race, you know, and that's what they try to do to be able to, um, try and replicate that level of performance. Whereas actually, if you come and work with us, you literally will. Well, basically, the problem with motorsport, and maybe it's the same with marathon running, I'm sure it is, is that there's a time and your name's next to that time, okay? So there's an identity that is connected to that time.
00:23:15 - Angela Brunson
So that's either a good time, you know, that'll do, or it's a mediocre time, or it's a hope nobody sees that timing sheet time, you know?
00:23:25 - Craig Muirhead (nsnconstructionnw@gmail.com)

And so what then happens is your identity is connected to that. And if the rider then doesn't know how to change what they're doing on the bike to change the time, then that obviously becomes a downward spiral, because we're stressed, we're already feeling under the cosh, we're already, like you were saying, expecting that we're not going to see much progress this weekend, it's damage limitation. Whereas, when it's a process, so the outcome of your lap time is the result of the process being executed. Yeah.
00:23:58 - Angela Brunson
If the lap time isn't...
00:24:00 - Craig Muirhead (nsnconstructionnw@gmail.com)
We want it to be. We can then adjust and polish what's, what parts of the process were, were insufficient. And so then you get less identity connected to your lap time, because at that point you're going, I can see why my lap time is not where it needs to be because I didn't do enough of this or I didn't do enough of that. So we get very granular in how you were. You, everybody talks about the bike. How, you know, how is it on entry? What was the, what was the grip like? You know, how, how is it on braking? How stable? Is it? That's fine. And that's probably been taken care of by the people that you've dealt with over the last 10 years in making sure the bikes capable. And as you've shown, somebody can go 10 seconds faster on the same bike. So we know the bike is capable. So that part of the equation is taken out of the, of our heads. That's great. And then it's about literally as, as going, let's get granular about how you were in that session. Well, I was fine until Billy Bob or Betty Bob went past me. And as soon as they did, I, just jumped on the back of them and tried to chase them, made a couple of mistakes, went deep at the hairpin and ended up, you know, screwing up my time a little bit. What we're then going to go is, right, OK, well, chasing Betty was actually the wrong thing to do. So we're able to give you feedback on where you need to be to be able to perform at your best. And that's what's missing for just about every rider on the grid is that they don't know what elements they need to focus on. So they're focusing on everything, you know, whereas actually we just want to literally like playing a musical instrument. We just want you to connect the dots. It's literally just A leads to B leads to C leads to D. And that's all you're doing. So there's less things to do. There's less things to focus on. But those focus, those things are critical. And, you know, rather than nice to do's that they are must do's, you know? Yeah. So what have you tried to fix this? You said. What That you've gone through 10 years of development. What have you tried to try and fix this? And what has happened when you've tried?
00:26:09 - Angela Brunson
Well, I mean, I think the most positive experience I got was there was a coach who had the earpieces and a microphone so she could speak. And I couldn't speak to her. And she would ride behind me and give me instant feedback, like elbow. Or, you know, we developed basically one monosyllabic cues. And that, to me, was so much more rewarding than you and I go out and ride six laps. You've got a camera. Then we go back and sit at a computer and you show me something on lap two, turn seven. And I'm like, I see that, but I have no connection to why that felt, how to recognize that that was wrong internally.
00:26:58 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yes.
00:26:59 - Angela Brunson
Or how you Recognize that I did a good thing, you know, I'm not feeling the g-forces or the amount of breaking or whatever it is we're talking about. You saying that was good or that was bad on a video, right? So I really liked the instant feedback from that particular coach. Some other things that have worked well with me that have maybe actually caused a bad habit. I wanted to run this by you. So I've done so much super bike school. I've gone through my

enjoyable riding bike, not my track bike. I'm on my second S1000RR. Like I really love the ability. Now, do I ride it like a demon? No. I just like to every now and then take it out for a casual stroll or commute on it, right? But what they said to me one time early on was, you know, we're going to go out there and do these drills and I want you to be at like 75% or 80% because you can't learn new things when you're on the edge of I think I might die. And that always resonated with me. Thank And so I used to treat a lot of my track time as I'm working on my lines or, you know, I'm working on turning points or breaking or whatever. And so that gave me that reason, that justification of I'm only going to give it 75, 80 percent effort because I'm working on something instead of I really need to be working on going freaking faster, you know. So there have been, like, things like that that I've kind of picked up and retained along the way, you know, like, obviously, I understand that you can't just go out and work on getting faster, like, by giving it 100 percent, that's not going to work.
00:28:39 - Craig Muirhead (nsnconstructionnw@gmail.com)
Well, yeah. Yeah, there's a difference between racing and testing or track day. Do you normally go faster in a race than you do the rest of the weekend?
00:28:52 - Angela Brunson
Yeah. So it depends if I have like that carrot.
00:29:05 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah, you're chasing somebody down.
00:29:07 - Angela Brunson
Yeah, somebody that I completely trust. Usually somebody as old as I am or, you know, not one of the kids that's sponsored by dad and a bunch of tire companies. Those people like I know better. The few times like I've had great moments have been like a qualifying session where me and that same that girl who's on the same bike, you know, we're friends.
00:29:30 - Craig Muirhead (nsnconstructionnw@gmail.com)
We trust each other implicitly. We know we're not going to like do something devious to sabotage.
00:29:35 - Angela Brunson
And we're truly joyous for each other when there are improvements, you know. Or like that one time I was talking about in one of the assessments where I do think I maybe experienced flow and I got on the back of the boyfriend and watched his tire, told myself, just maintain that gap, nothing more, nothing less. And my mind did go blank and I went very fast. And I've never replicated that again. So there have been times, those fleeting moments of just, oh, my gosh, this is fun. And I'm not thinking about it, you know.
00:30:12 - Craig Muirhead (nsnconstructionnw@gmail.com)
And that's where we've got to get you.
00:30:14 - Angela Brunson
Because the problem is, you were an attorney, think, aren't you?
00:30:19 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah. Yeah. So in your work and your schooling, your home life, your work, you're told if you've got a problem, work harder.
00:30:29 - Angela Brunson
I literally have shirts and coffee mugs that people have bought for me that say, hold on, let me overthink this.
00:30:37 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah, yeah, yeah, yeah, yeah.
00:30:38 - Angela Brunson
And I've worn it to like race weekends. And I just sort of, yeah, it's so true. That's, that's me. I

just, it's so hard to turn it off.
00:30:46 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah. So, so, so that's your default setting. You've got an analytical mind. So things have got to make sense to you. So you're not going to be a blind faith. Oh, right. I just close my eyes and do what somebody tells me, you know. Which I never expect you to do, but, you know, you are, you're an analytical mind that needs to, things need to make sense for you to then process them and apply them.
00:31:09 - Angela Brunson
Okay. It's almost a curse because like, you know, when the coaches tell you about how the, the geometry of the bike, they want you to understand how small the contact patch gets when you turn and how much weight goes on it when you break. Like, I know all that. I retain all that. And I constantly am aware of that, you know, like, oh, this is the part where the contact patch gets. It's very small, you know, like, yeah, it's a, it's a curse.
00:31:34 - Craig Muirhead (nsnconstructionnw@gmail.com)
It is. And it's, and it's only, you know, we talked about the subconscious brain and the, and the conscious brain in the training. So you're running at that 110 bits, which feels like overwhelm, you know? So how can somebody be 10 seconds faster than me? Cause I'm flat out, you know, I'm like this feeling on the bike because you're processing.
00:31:54 - Angela Brunson
more than that. I know how small my contact patch is getting when I turn. I know, you know what I mean? That's like even.
00:32:00 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah, exactly. So what we've got to do is we've got to rewrite that. We can't change your analytical brain, okay? But what we need to do is we need to rewrite what you're focusing on when you're on the bike. Because you're using unproductive thoughts, okay? So you'll be going, oh, that person in the, you know, the marshal's got a red jacket on.
00:32:24 - Angela Brunson
I've got a red jacket.
00:32:25 - Craig Muirhead (nsnconstructionnw@gmail.com)
Where's that red jacket? I haven't seen that red jacket for three years. I wonder where that red jacket is. You know, and that goes on for three corners. So what we've got to do is we've got to have tools to be able to catch yourself, first and foremost, because that could go on without you even knowing it's gone on. But with the training, you're going to recognize that that's going on. Catch yourself and then use a tool to get into a more productive space. It's very much connected to goals because your goal, you'll have stopped making goals because you're disappointed in not achieving them. And that's really normal. No wonder. For a lot of people that are mid-pack in any championship, but goals are massively important for you. So setting the right goals, not, all right, okay, I'm just going to go and get 10 seconds, you know, that will just become stress and become demotivating. And we actually get upset that we've made that goal when we don't see progress towards it.
00:33:21 - Angela Brunson
Yeah, that was so stupid for thinking that.
00:33:24 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yes, yeah. Whereas when we're setting goals, we've got a really powerful goal-setting process. When we're setting goals that you are constantly achieving, you actually get a chemical release in your brain.
00:33:35 - Angela Brunson
Yes, that reminds me. I wanted to tell you earlier when I was trying to answer a question. I

started to notice improvements probably that between the second, first and second year, I was winning championships and doing well in the 400 when the AIM Solo 2 came out. Because those green lights, right, instead of being like, say, at just a track weekend and going, oh, Mr. here. Thank Mr. Harley on the bagger, who I don't believe should even be on a racetrack, but somebody decided to let you guys race, and here you are on my MotoGP racetracks. Yeah, you guys, I would always be like, you go right ahead, Harley, and just, you know, crash over there or over there, I'm going to give you space. When the AIM Solo 2 is showing me a green light, that, like, warrior in me comes out, and, like, I am not going to go out here and just do trash laps because a Harley is near me, right? I'm on a green light lap here, and whether it's one green light or all six green lights or whatever, like, right, it's really that instant feedback of, I am doing well, I'm not going to sacrifice my progress. Yep. And prior to the AIM Solo 2, I would just be like, oh, that guy looks sketchy. Those lines are terrible. Just, you go ahead. I'll do a four-minute lap to let you get some space.
00:34:56 - Craig Muirhead (nsnconstructionnw@gmail.com)
That, I love that the AIM Solo 2 has sort of so you've changed. It's your mindset when it comes to traffic. Yeah, yeah. One thing that may be a problem, though, is the distraction of the lap time. So you could be turn three, am I up or down? Turn six, am I up or down? And so actually, is this lap going to be any better? So it's actually an internal distraction. So, again, we can we can we've got ways that we can deal with that once we break that distraction, you know, but a lot of people are actually spending a lot of time thinking about their lap time, whereas actually they're not paying that much attention to their riding because we're going to focus back on your riding. OK, not on the zillion other things that could be at play. Let's just deal with the facts that are at play, you know. And so so that that's that's important. That's important to we've got to give you a brand new approach, you know. and QR code feel How to ride a bike, that's a given. You might not feel like you're riding it at your best at the moment, but you know how to ride a bike. You doing more super bike schools or there isn't, you know, some magic, you know, coach that you're going to go to that goes, actually, all you need to do is move your shoulder half an inch and you'll get, you know, an extra, you know, three seconds a lap. The technique aspect that you've done is now, you know, your own technique. And I've got nothing against rider coaches. They do a great job. I've got nothing against data engineers. They also do a great job. But both of them try to get riders to emulate a faster style. And somebody like, you know, your natural style is your fastest. So, you know, you might not get off the bike a lot. And they'll go, oh, well, you should be, you know, you should be like Pedro Acosta now, you know, but actually your style, you know, Jonathan Ray. Thank who's won seven world superbike championships, doesn't get off the bike a lot, you know? So nobody, you know, Johan Muir arrived in Moto3 with a completely unique style, but nobody asked him to change it because he was the fastest guy on the grid. So it's not necessarily always your style. Yes, if you're doing something wrong and you're grounding out the foot peg every other corner, then yes, you know, there's a fundamental problem, but we've got to trust in our ability to ride the bike, and then shift our focus to more productive thoughts that are going to propel you forward, you know, and using the tools. So what is the goal for this season then?
00:37:44 - Angela Brunson
To not suck in your mind. No, honestly, so now they're live streaming our races, and the race organizers said, hey, everybody fill out this little questionnaire so that the announcers on the YouTube stream will have something. So I filled it out with just such sarcasm, but I think it was coming from a place of honesty, and one of the questions was, what's your goal for this season? And I said, to embrace mediocrity, right? Because I just feel like I've plateaued, and I might as well enjoy it, because it's, you know, like, that way, again, I'm not disappointed if I set a lofty goal

and don't come close to achieving it. And they said that over the air, you know, during the stream, I don't remember if it was round two or round three or whatever, and they got a big kick out of it. But there I was on screen being mediocre, you know, so anything above mediocrity, I think at this point is like the only goal I'm willing to set for myself, again, for fear of not achieving it, especially in light of, you know, there's a bike in the garage that it's not done being built yet. And I'm mid-season, and I'm at a kind of a low point with the whole mental approach, obviously. Yep. Absolutely. Yep.
00:39:00 - Craig Muirhead (nsnconstructionnw@gmail.com)
Just one quick question. What do you do in the summer? Do you do anything once this CBMA championship finishes? Do you do any racing then?
00:39:11 - Angela Brunson
Not racing, no.
00:39:12 - Craig Muirhead (nsnconstructionnw@gmail.com)
Most of the tracks around here are just ungodly warm during the summer. I know quite a lot go to Utah, don't they?
00:39:19 - Angela Brunson
Yeah, we have gone to Utah once or twice and Laguna Seca, you know, when we make like a weekend out of it. We have one of those toy hauler campers with the kitchen and the beds and the shower. So, and you put the bikes in there as well. Yeah, great. Yeah, we do enjoy going to other tracks, but not normally for racing.
00:39:40 - Craig Muirhead (nsnconstructionnw@gmail.com)
Not to do a championship, yeah.
00:39:42 - Angela Brunson
Yeah.
00:39:42 - Craig Muirhead (nsnconstructionnw@gmail.com)
Okay, so I'm not going to put to be mediocrity, you know, to beat my mediocrity.
00:39:49 - Angela Brunson
bit, just any kind of improvement. No, honestly, it's not even about the lap time, I think.
00:39:54 - Craig Muirhead (nsnconstructionnw@gmail.com)
It's about just learning.
00:39:56 - Angela Brunson
Enjoyment? Yeah, enjoying, but also maybe learning about. Yeah. We things we're talking about, like the filtering out all of the unnecessary data in the brain, kind of internal goals, if you will.
00:40:14 - Craig Muirhead (nsnconstructionnw@gmail.com)
Okay, yeah, yeah, okay.
00:40:15 - Angela Brunson
And if the lap times improve, then hey, that's great. But if I'm having more fun, I think that's even more important for me at this point than the lap times.
00:40:24 - Craig Muirhead (nsnconstructionnw@gmail.com)
I guarantee if you're having more fun, you will be faster because it is connected.
00:40:28 - Angela Brunson
Yeah.
00:40:29 - Craig Muirhead (nsnconstructionnw@gmail.com)
You know, when it feels like the hardest day on earth on the bike, I guarantee you're slow. You know, it's because that's also connected, you know.
00:40:39 - Angela Brunson
It's weird. It's not physically hard. No, it's mentally hard. Yeah, it's mentally exhausting.

00:40:46 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah.
00:40:47 - Angela Brunson
You know, trying to, like, think about so many things and then criticizing yourself at the same time and thinking about the next corner while you're kicking yourself in the brain for what you did.
00:40:59 - Craig Muirhead (nsnconstructionnw@gmail.com)
doesn't matter. And we'll back. Yeah.
00:41:01 - Angela Brunson
You know.
00:41:02 - Craig Muirhead (nsnconstructionnw@gmail.com)
So, I mean, this is one or two years of struggle. How have you managed for so long?
00:41:07 - Angela Brunson
I think a lot has to do with riding the coattails of the success, even if it's not like, you know, well-earned successes. And also just watching him continue to improve. And it is, he literally has shirts that say racing is life. And, you know, like he lives, eats and breathes this. So, I think a lot of it has just been me shifting my attention to the joy and the cheerleading aspect of his racing and caring less and less about mine. Because it's just, it's not, it's a very lackluster situation in my part, in my department of the racing couple.
00:41:51 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah. I think you do say in one place that you sort of have to fake that you've enjoyed the weekend.
00:41:57 - Angela Brunson
Mm-hmm.
00:41:58 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah. Yeah. Which is not a nice place be. So, I mean, what would life be like if you were both enjoying your racing?
00:42:08 - Angela Brunson
Wow. I mean, we did. I did when I was doing better with, you know, not very fierce competition. And I remember looking forward to it, you know, because I was every now and then magically, mysteriously having good moments, you know. So, but I felt like we shined together when we were both winning instead of me just sort of like, yeah, you're doing great.
00:42:35 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah. Yeah. Yeah. Okay. Yeah. I can see that. So if nothing changes, if we didn't find a way to work together and you get the Ninja 500 built and we roll out for the next three rounds, what, where will you be if, if we, if nothing changes?
00:42:55 - Angela Brunson
I'll just be getting better and better at being a cheerleader and a pit crew chief. be[?] be right For him.
00:43:01 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah.
00:43:01 - Angela Brunson
Until he's done with it.
00:43:03 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah. Okay. So not a very rosy outcome.
00:43:08 - Angela Brunson
No.
00:43:09 - Craig Muirhead (nsnconstructionnw@gmail.com)

Okay.
00:43:10 - Angela Brunson
Maybe like I said, I'll take up knitting and I can knit at the track or something while he's out, you know, winning the prize money.
00:43:18 - Craig Muirhead (nsnconstructionnw@gmail.com)
You can start knitting race, race gear.
00:43:21 - Angela Brunson
Yeah.
00:43:23 - Craig Muirhead (nsnconstructionnw@gmail.com)
Okay. All right. But that, I mean, we're talking about it quite flippantly, but I take it that isn't an option. For you right now, right now you want to try and improve rather than go. I'm ready to hang my leathers up because that's quite an important cross, you know, crossroads to be at.
00:43:39 - Angela Brunson
Yeah, no, as we speak here now, absolutely. I agree with you. But if I have another crappy weekend, then I'm probably leaning more towards the yeah, I'm okay with quitting because I have felt like that reality of accepting a quitting has become less repulsive. activity feel You know, as those weekends stack up and don't show results and there's a struggle and that newer, faster bike is not, for me, faster, yeah, like, and you add up the money and, you know, how much time and money would I have saved and how closer would I be to, yeah, you know, you start seeing these bigger pictures of the cup being half empty when it comes to racing instead of being half full.
00:44:31 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah, but I'll be honest with you, I've had loads and loads and loads of last season clients. This is it, you know, I'm hanging up my leathers if nothing changes.
00:44:44 - Angela Brunson
Oh, I wouldn't say that for sure.
00:44:48 - Craig Muirhead (nsnconstructionnw@gmail.com)
Okay, but I'm not at the point where, like, this is my last season.
00:44:51 - Angela Brunson
I would just start to accept the fact that the last season is much closer. Yeah. You know?
00:44:58 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah. But all I was trying to explain- It's because they've had enough, which actually is a great position for change, you know, and they've had enough of being where they were. And if nothing changes, I'm giving it up. They started with the course, they started to apply a new approach to their racing, and they're still racing now. Because they've got the fun back, they've got the mojo back, they're quicker than they've ever been before. I've had people literally in their first week of training go and break their PB. Because there are some things that they were just literally saying to themselves, I can't believe that I'm, I'm so far off where I where I should have been thinking or should have been using, you know, so I'm not I'm not everybody's different. So I can't use that as a guarantee. But definitely, it's a case of when you start to see things differently, because of the way that you're approaching it, things change, things know, what you what you look at change. And So that's important. Okay, so I'm just about done on the questions. I was looking at your scores on the seven biggest mistakes. So you had competitor obsession you had at 90%, overthinking trap at 70%, half commitment 65%. So those were your three highest issues there. So the competition aspect, has that always been there, that you rate yourself against the other people?
00:46:42 - Angela Brunson
I by that one and also by the, I knew the overthinking, I thought the overthinking would be the

biggest one.
00:46:50 - Craig Muirhead (nsnconstructionnw@gmail.com)
I'm sorry, you're absolutely right. I've done it in a line and I can't tell which one. okay. When I've, when I've looked at the thing, it's 55% competition. Fathom obsession, 90% overthinking, and 70% half commitment. Yeah. Okay. So, yes, that does sound more accurate, doesn't it, the overthinking? Yeah. Has that always been the way? When you've looked at your marathons and these sort of things, have you been applying overthinking in those areas as well?
00:47:23 - Angela Brunson
No. I think one of the lovely things I was able to do for some reason with marathon running is tune out and go into, I call it like a zen, or sometimes I call it autopilot. Yeah. But it is, I mean, think about it. physically not very demanding to put one foot in front of the other. And it's a state, you know, if you fall, it's five feet to the ground at six miles an hour, 10 miles an hour, you know, as opposed to what we're doing. So I feel like maybe that's one of the reasons I was able to achieve that zen autopilot state for three plus.
00:48:01 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah.
00:48:03 - Angela Brunson
It's just a very different activity.
00:48:06 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yes. Yeah. And there's a runner's high, isn't there, you know, which is a flow state, you know, it's a version of a flow state. So, yeah. So, and what the beauty of that is, is the fact that you've been able to apply that to that sport means that we just need to find the route for you to be able to apply it in this sport. And because it literally is, I think you used the phrase that you've seen the training over the last 10 years, the various people that you've talked to and got advice from as a bit like an all you can eat buffet. And you've picked and chosen which things work for you. For peak performance, it's actually the recipe. So it's not the buffet that you choose what to like. It's actually a checklist to go. I've done this. I've done that. I've done the other. just like... What do with the bike? The tire pressures are set, it's got fuel in it, we've checked the oil, it's ready to go. But we don't do that with the rider. The rider's just had a coffee, been chatting to somebody, maybe had a phone call, and even on a Friday, probably done a works email reply, and then, right, I put my helmet on, and out we go. So we're not giving the rider all the opportunities to be able to be in peak performance. And then exactly the same with when you arrive back. So when you finish a session, we have an app on our phone that you then open up after you've done the technical debrief about who works on the bike. Do you work on the bike yourselves, or do you have some help?
00:49:42 - Angela Brunson
Yeah, us, yeah.
00:49:44 - Craig Muirhead (nsnconstructionnw@gmail.com)
Okay. So once you've decided what you need to do to the bike, between that and the next session, we then have got a debrief on your phone, which is 20 questions. So you literally answer 20 questions about how you performed in that. Okay. And you'll, the questions are related to the training that we've done. So we've basically got a three pronged approach. We've got correct knowledge. So there's the same training that you went on that you did the three days training in. You get a similar login that takes you to the full training. Okay. And our attention spans, we've already already been on this call too long. Our attention spans are shorter than ever these days. So we've actually got it down to 10 minutes per day. We talk about one topic related to your performance each day. So you just watch that. You've got all day to think about it. And then tomorrow you watch the next one. So that's given us correct knowledge about the

neuroscience, about peak performance, about what your brain needs to be able to perform at its best. So that's the first element that you know why we're asking the questions that we ask. And then the feedback is giving us the debrief in how you perform. And then the session. And then the app will literally tell you what to focus on to be able to improve in the next session. So you're getting sort of real-time feedback throughout the course of the weekend. And that is keeping you on point and also reminding you about the key areas that you need to be focusing on rather than on Monday, let's sit down and have a chat and see how the weekend went. And so that feedback is really important. And then we also, on day three, we showed you the flow tracking technology. So what do you do for fitness? Do you run still or do you cycle or what do you do?
00:51:42 - Angela Brunson
Well, I do a lot of weight training and CrossFit.
00:51:45 - Craig Muirhead (nsnconstructionnw@gmail.com)
Okay.
00:51:46 - Angela Brunson
Hiking, jogging, not really a long-distance runner anymore.
00:51:50 - Craig Muirhead (nsnconstructionnw@gmail.com)
Right. And do you do anything on a static bike or a rowing machine?
00:51:55 - Angela Brunson
I have a rowing machine and a treadmill at home.
00:51:57 - Craig Muirhead (nsnconstructionnw@gmail.com)
So, um... For us sitting here right now, our heart rates are probably at 49 beats per minute, and it's very easy to get into flow, into that zen state, when your heart rate is low, okay? When you're on the bike, do you wear a heart rate monitor when you ride the bike? No. When you ride with a heart rate monitor, you may find that you're running at 180, 190, even 200 beats per minute, okay? I've got riders, plenty of riders that are at over 200 beats per minute while they're on the bike. So it's very hard to replicate that heart rate monitor level, as you can imagine. But the higher the heart rate, the harder it is to get into flow because your brain waves are connected to your heart rate. So when you saw the brain trace that we did for the driver and the simulator, you could see that flow was a low level of brain activity, so we're literally no thought, okay? And so what that then means is that we can replicate in a gym on the rowing machine, get up to So 150, 155, you know, with an effort, maybe 160. How long is a race for you?
00:53:07 - Angela Brunson
Six laps, so about 18 minutes, 12 to 18 minutes.
00:53:11 - Craig Muirhead (nsnconstructionnw@gmail.com)
Perfect. So we want to also do the same duration. So we're rowing for 15 minutes, let's say, on average. And we're in flow. We're using the techniques that we use to be in flow. You've got feedback from the headband that gives you an audible tone in your earphones that you're in flow for that time. So that becomes a confidence booster because you've been able to prove away from the track that for 18 minutes, I can be at 160 beats per minute and be in flow. So all we need to do is duplicate the same techniques on the bike when you're on the track. So you actually have got the correct knowledge. You've got the technology to take the guesswork out. So you're not guessing whether I was in a good state or not. And you... got the feedback on how to improve. So even if you're P1, we're still going to find areas that we can polish and you can improve in the next session, and then you're going to get them by half a second. So that's how the system works. Does that make sense?
00:54:14 - Angela Brunson
Yeah.
00:54:16 - Craig Muirhead (nsnconstructionnw@gmail.com)

Okay. Any questions on that?
00:54:18 - Angela Brunson
Yeah. Not to sound skeptical. I'm just curious. Like, how did you come to, like, work in this area? Like, do you have, like, training for the brainwave stuff?
00:54:32 - Craig Muirhead (nsnconstructionnw@gmail.com)
No, no, I don't. I worked for Aprilia. worked for Piaggio, who were the owners of the Aprilia brand in the UK. And I turned 50 in 2016, which tells you how old I'll be this year. And I knew I wanted to make a change. I didn't know what to. And so I walked the Camino de Santiago in Spain. So 700. So I walked that to try and figure out what to do next. And coaching came up as a feedback from other people that I was talking to as well. And so I came back, I trained as a coach, and I started coaching in businesses because that was my background. So I was coaching with CEOs and business leaders, but I didn't enjoy it. I wasn't getting any real fulfillment out of it. I could do it, but there was no fulfillment. It was too close to my previous role. So I coached myself and said, okay, Craig, what do you want to do? I finished with a client and I thought, well, I don't want that client again. What type of client do you want? And I thought I'd always loved racing. I'd done some racing myself at a very low level. I'd always loved racing. And I said to myself, I want to help a racer that's lost his mojo or her mojo and find a second a lap. And so then I had to go back to school and learn on the principles of, of, of people. Before. I met Henry and his father. They're from Brisbane, Australia, in 2018. So in my flow training, I trained with two of the world's leaders, basically, Jamie Whelan and Stephen Cotler on flow. And they had had an experiment with F1 drivers in a simulator. So I got the white paper for that. And I reached out to the people that did the did the experiment. And they were in London for a conference. Henry and his father were the two can't remember his dad's name now. But Henry runs a company now. And his father was the founder. And they they've made these this technology. And they actually started in, in golf. So they took two golf players to PGA world number one with the this training, they basically got in competition. They could wear the headband underneath a, you know, they all wear a baseball cap anyway, don't they? So the baseball cap, the headband's on underneath, they've got earphones in, they've got a phone in the back pocket, they're then doing the techniques and the training, they hear the audible tone of being in flow, and then they make the shot. And they've got two guys to world number one with that. And so I then was looking, you know, on how we could take the guesswork out, and so I've partnered with them on the motorsport side ever since 2018. So I've learned a lot from them and a lot of data analysis, but no, I've got no medical background at all.
00:57:45 - Angela Brunson
So it's super interesting.
00:57:48 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah.
00:57:48 - Angela Brunson
Yeah, I coached CrossFitters for a while, and I've even coached other riders, you know, the beginner girls kind of thing. Yeah. And I'm always like to. Telling them, look, you should do as I say, but not as I do, because I've gone through so many coaching experiences and reschools that I know what works. Now, do I apply it to myself? You know, in theory, yes, but am I getting the results I should be getting if I really was my best, my own best student, you know. So, yeah, I like, I like paying the knowledge forward. But then when those girls that, you know, you had to drag around the track at, like, four minutes, when they start going faster than you, then it's like, I'm not coaching anybody anymore.
00:58:33 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah, you'll do it until they're not as quick as you. But I'll be honest with you, you've hit the nail

right on the head. The knowledge isn't the key. You've got a stack of knowledge. You could write three books on riding a motorcycle, okay?
00:58:50 - Angela Brunson
Yeah.
00:58:51 - Craig Muirhead (nsnconstructionnw@gmail.com)
But the knowledge isn't the key. I know that I should eat less sugar and drink more water, but it doesn't mean that I do it.
00:58:58 - Angela Brunson
And so it's...
00:59:00 - Craig Muirhead (nsnconstructionnw@gmail.com)
It's actually finding ways to make it implementable. That's really the key, to be able to implement what you know that is going to help you, and then you don't deviate. So somebody like Marc Marquez, all he's been expert in is having the discipline to keep doing what he's always done. And that's what's made him, you know, one, a master in his field, and then secondly, you know, a nine-time world champion, because he's just now got a process that he's not going to deviate from. And then you'll have other riders that aren't as successful, who are trying this one year, and then they're trying that the other year, and they're trying to find the magic milkshake, and there isn't one, because it's grind. You've got the enthusiasm of something new, and then you've got the grind of you working on it for those 10,000 hours of mastery, you know? And that's the difference, really, is knowing that you're going in the right path, b-b-b... Putting in the work. And that's why only one person stands on the top of the podium every weekend, you know? So let me just share the screen with you, and I'll just show you quickly. I know we've been on for a while, so I don't want to take up much more of your time, but I'll just show you quickly what we've got once you're on the actual program.
01:00:26 - Angela Brunson
Can you see that screen? Yes.
01:00:29 - Craig Muirhead (nsnconstructionnw@gmail.com)
Okay. You're not on a phone or anything, are you? No, I'm on a laptop, so it's fine. So at least you can see it. That's good. So you can see there we've got a timer that started the same as we had for the free training, so 104 days of modules, okay, that we've got. And you just literally scroll down, there's a couple of links there, and then whichever training you're up to is always here on the homepage. So wherever you are, you just go back there, press that. And you're straight into where you left off. But the modules that you can see, literally, the first one is just how to get the most out of an online training program, good practices and good disciplines. The second one is to download and get the app on board. So for next weekend, you know, we'd literally be using the app and the feedback. And then you're into the first training module, OK? And you can do the first two in half an hour, you know, to get those up and running. And then you're into the first training module. So the first training module, I think, is 12 or 13 lessons. And you literally just go on exactly the same as you've done with the free training. You can see from this one, it's sort of seven minutes and 35 seconds. We're talking about mindset to begin with. And then there may be a couple of items or things to do. Thank you. And underneath it, and then it loads up the next one for you to for you to move on to. And at the end of each module, you then have a call like this at the end of each module. And so we can make sure that it applies. So you just have access here to my, my calendar and you book in a call. And we need to make it applicable to your environment. Like you're saying, Red Bull Rookies or World Superbikes is a completely different environment. We've got to make everything we're talking about applicable to your environment. And what you have is a race weekend structure. So obviously, this one's very short, because it's only the first module, but you literally print it out,

stick it to your van door, and that becomes your checklist to literally go, right, I've done this, I've done that, I've done the other, I'm ready to I'm ready to go out. Then when we come back in, we do the debrief. And so that's literally, we've got less things to think about, not more. You know, we want to try and, you know, strip away all of the extra noise that you've got. And so then once you've done that first module, we then go into warm preparation. We talked about that earlier about that, you know, 10 minutes before I need to go out. I'm still on the phone to somebody or whatever else. Giving yourself that. You know, I always use a comedian as an example. You don't need to be funny 24 hours a day. But you need to be funny at 730 on a Saturday night when there's 3000 people in an auditorium waiting for you. So what that comedian does is they flick a switch to take them from the normal, non-funny person into the comedian. And we've got to do exactly the same thing. It also helps with the distraction level. You don't see the red jacket or have the debate about the red jacket when the brain knows what you're doing for the next 20 minutes. So when we've set a goal and we're going, right, I've got some, some priming and. Some triggers to say, right, I'm now doing this for the next 20 minutes, the brain doesn't wander off as much. So that's important for us as well. So that module is all about being warm up and preparation. And then we're into sensory mastery. This is a module that we've got about gathering more data and more references. Because if you're struggling, know CVMA has a very strange track, very open, not much references to take. But if you're struggling at a certain part of the track, it's because we haven't got enough references. So this process is something that we would use on the first outing, the FP1, or if we've got a test day, for us to literally gather more data. And that helps us go faster later. And then we're into goal setting. Massively important, like we said before. Really important for us to be able to drop into flow and access our subconscious. When we've set a really meaningful goal, it actually triggers an awful lot of things for us, but it's not that big out of reach goal, it's actually one that's right in front of us, which is important. We then go into mind mastery and visualization and mental rehearsal. Do you do any visualization yourself?

01:05:20 - Angela Brunson

I try to, but I think I was telling you in one of the questions about, like, before a race, I'll try to close my eyes and envision turn one, turn two, you know, and I almost never get through the track mentally because of all of the nonsense, the drunken monkey, the criticizing, the negativity, the, you know, I'll be mentally at turn three and I'll remember, oh, I forgot to do whatever back on turn one, you know?

01:05:47 - Craig Muirhead (nsnconstructionnw@gmail.com)

Yeah. Yeah. Okay. So, so we've got a really powerful process, which I think can overwrite that for you and give you some really good actionable tools to use. And in, because it's a real. It's a really powerful tool. If you've done your racing next weekend, if you've done 100 race starts between now and Friday, how good's your race start going to be in reality? Because you've run through every scenario, you've run through leading into turn one, in a group going into turn one. And so you're far more prepared than the person that's just, fingers crossed, everything goes well at the start, which is what most of your competition are. Most of your competition are, fingers crossed, this weekend goes better. Then we get to modulate, which is belief system. So your belief system is literally your rev limiter. Nothing will go past what you currently believe. So if you can imagine, we've seen it in history all the time, where somebody's locked the front with two corners to go and never run a race. And it's because if we don't... And believe it, then we're going to find ways to make sure it doesn't happen. Now, belief doesn't come from rah, rah, rah.

01:07:08 - Angela Brunson

It's not from me ringing you, you know, on the Saturday, don't worry, you've got this, you know, I believe in you. Yeah, you can do it.

01:07:17 - Craig Muirhead (nsnconstructionnw@gmail.com)
You know, it's, it doesn't work that way because the drunken monkey, the inner voice will just go, Craig has got no idea what he's talking about. Yeah. So, so what we need to do is we actually need evidence. So somebody like, so are you good in the wet, for argument's sake?
01:07:40 - Angela Brunson
It doesn't, you don't have to be in Southern California.
01:07:43 - Craig Muirhead (nsnconstructionnw@gmail.com)
Okay, so you haven't got wet experience. Are you good at a race start?
01:07:47 - Angela Brunson
Uh, nope. Okay.
01:07:49 - Craig Muirhead (nsnconstructionnw@gmail.com)
Are you good on an overtake? Are you good at being able to make a pass on somebody? Sometimes.
01:07:56 - Angela Brunson
Okay.
01:07:57 - Craig Muirhead (nsnconstructionnw@gmail.com)
Are you good on a used tire towards the Are you good at defending if you're leading and being able to?
01:08:11 - Angela Brunson
Yes, I have some good race crap. People always say I'm very difficult to pass.
01:08:17 - Craig Muirhead (nsnconstructionnw@gmail.com)
Okay, great. So you've got evidence that backs that up. So when somebody says to you, if you get out front, don't worry, you can hold them off. The inner voice is quiet. Because it hasn't got any, it can't dispute real facts. Okay, so somebody like Marc Marquez, all he's got is more things he's got evidence in. He's got evidence with his race start, he's got evidence in the wet, he's got evidence in being good on a used tire, etc, etc, etc. So it ends up being a ring of confidence that's very hard to impregnate. And what we've done by the time we get you to module eight, is we've... Change your belief system, because you're actually going, I've done more preparation than these people have got, I've actually done more visualisation or mental rehearsal, I've got better goals than they've got, I've gone and created my references on my track map, and I've got a better mindset, I've got a better outlook, my expectations are completely different to how they were coming into round three. So all of a sudden, the inner voice has got nothing to argue with, because of the work that you've actually done away from the track. Does that make sense?
01:09:35 - Angela Brunson
Yeah, absolutely. They're, like, I think there have been times where, okay, I got a good night's sleep last night, I've been working out, I've been drinking my water, I haven't been eating all the sugar. And so those voices that would normally nag at you are quiet. And sometimes that might contribute to going a little better or having a little more fun. Or feeling a bit more confident. So that does resonate, not on, You know, the biggest scale that it should be, but I get like, I'm starting to understand the connection there.
01:10:07 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah. And we just need more things, you know, so the more things that we build, the more that it's got, it's got less opportunities to jump in because it goes, ah, you've covered that. You've covered that. Oh, you know, so, so I can't argue with you. There'll still be things that it comes up with, but as long as we're covering the key areas that are related to your performance, know, it might, like I say, you know, it might say, you know, you're good at racecraft and it might say, well, Betty's good at racecraft also, which is true, but it's not going, well, you'll, it'll be a disaster

and you won't be able to do anything. You'll look foolish because what we really want to avoid deep down is looking bad. That's what we're trying to avoid. So, um, so our, our inner critic is always trying to expose our opportunity of looking bad. Okay. So when we cover a lot of these areas that are related to you, Ryan, So were just talking about Fathom, Brunson, nsnconstructionnw&gmail nsnconstructionnw&gmail But now there's actually a whole host. Riding a motorcycle on track is a really high flow environment. So there's a whole host of triggers and conditions that you're just immune to at the moment that you don't see. So as soon as you start to see them, because we educate you on where they are, you actually see more things related to flow. So seeing more things related to flow gets you more flow, which actually generates more things seen for flow. So it just becomes a cycle. um, and then obviously we take away the So that's literally the training in total, all the way through to some onboards that we have for certain tracks, which there's no reason why we can't do Chuck Waller as well for that, and we've got some cues, and we wear the headband while we're watching it, and get you in flow for the track, because for your brain, all the track is, is a pattern. So all we want to do is embed that pattern better. So on a scale of 1 to 10, I like my scales of 1 to 10, you'll know that from the assessments, how close do you think that would come in being able to fix the problems that we talked about earlier?
01:12:49 - Angela Brunson
I think that would be the key, really, because I mean, as you've seen, the overthinking is the problem, that having the drunken monkey, that is the problem. And, you know. We all So we can't do can't do It's But don't might You mentioned like you have to be able to turn off the human, the normal non-funny person and become the comic, right? Like there's no distinction between, okay, other than wearing the clothes and the helmet, right? I'm still the overthinking girl. I am off the bike that I am on the bike.
01:13:22 - Craig Muirhead (nsnconstructionnw@gmail.com)
I'm just wearing a different outfit, you know? Exactly. Yeah, without a shadow of a doubt. We can absolutely turn that around by having a real warm-up and preparation routine. So, you know, 35 minutes before you need to be in the holding area, you're literally gone back to the motorhome and you are preparing to go out. So your session's already started because you're preparing for your session. So the nerves that you get 10 or 15 minutes before you go out, we don't get them as bad because we were actually busy at that time. Whereas it's the sitting around. And waiting, then we start thinking about all the dreaded things that might happen. So, so we combat quite a lot of that as well, as far as that's concerned. Okay, so any other questions at all?
01:14:15 - Angela Brunson
No.
01:14:16 - Craig Muirhead (nsnconstructionnw@gmail.com)
Okay, so I've still got some other calls to take for some other people that are finishing as well. And what I'm going to do is I've made a lot of notes as well. I'm literally going to go through, see who I think is the right fit. You obviously get a time to think about it, talk to your partner as well, and see if it's something that you want to do, and then we can re-engage and have a further chat about it. If there was an opportunity, do you think that this would be something that you would want to do?
01:14:49 - Angela Brunson
Yeah, definitely.
01:14:51 - Craig Muirhead (nsnconstructionnw@gmail.com)
Okay.
01:14:51 - Angela Brunson
Like I was saying before, it seems like something that could be beneficial, not just for track and

racing purposes. have at Right? I mean, trying to go to sleep at night, right? That's another time that I just, it's a challenge.
01:15:07 - Craig Muirhead (nsnconstructionnw@gmail.com)
Race Ready, the module three, is all about you being, you know, optimized, and sleep's a massive one. So we get used to running on four or five hours, six hours, whatever we get, but actually to be able to perform at your best, sleep's a really big one.
01:15:26 - Angela Brunson
Right, but being able to, like, control mind and turn, go into flow or, you know, stop the noise, I think, is, like, not just key to my racing improvement, but key to, like, overall general life.
01:15:40 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah, and well-being. Yeah, exactly. Yeah. Yeah, exactly. That's good. Okay, so we can book another call and see how we both feel. I think we should cover pricing, so you know what pricing is before we go. So, and then you've got that to think about as well. So, how it works, this isn't a subscription. You actually buy it and own the platform. So you basically have got lifetime access to the login to the platform. So there's constant updates because neuroscience doesn't sit still. So as you get any new training, that's all added to it. And I've got a lot of people that go back and watch the training at the next offseason because the goal changes. So if the goal changes, so maybe you're going to go to 600 next, I don't know. The goal changes, we're applying, or 1,000, you've got 1,000, the goal changes. So the training then applies to that goal. Because what's literally happening is that I've seen a lot of people that put all the effort in to try and achieve something, and then they get there and stop doing the things that actually got them there. And it's a human. It's a bit like being on a diet to get to your perfect weight and then going for a McDonald's to celebrate, you know, whereas what we need to do is we need to be finding what works for you, and then applying that all of the time, and then you're able to get it into an automatic stage where you're, this is what I do, this is how I approach my riding, this is our approach, the end of a race is our approach, a battle, whatever it might be, because the challenges are always moving on. There'll be some new fast kids arriving, or whatever it might be, and we're just applying what we do to those people, so you've got lifetime access to the platform, and you can go back to it whenever you like, and you've got 12 months worth of coaching with me, and you've got 12 months access to the app for the after session debriefs, and at the end of 12 months, if you want to carry on with the coaching, And the app, we just have a monthly rolling fee for that. It's just a hundred bucks a month for that. But the total program, including the headgear as well, that we send that to you, that gets posted out to you. And I'm also old school. You get a hard copy book because you're watching a video, but you making notes is a very good way for you to retain the information. So there's a hard copy book that gets sent out to you as well. And so all of that is £4,000. How does that sound to you?
01:18:34 - Angela Brunson
Is that the same as dollars? I haven't liked lately.
01:18:38 - Craig Muirhead (nsnconstructionnw@gmail.com)
It's not far off, I don't think, but we'll have to have a look. It used to be a lot more, but the dollars caught up. It's, I think it's 5,372. it's unusual, How does that sound to you?
01:19:11 - Angela Brunson
Well, I mean, I just spent that on a bike, so it's doable.
01:19:16 - Craig Muirhead (nsnconstructionnw@gmail.com)
It's doable. Okay, well, you can have a think about it as well, you know, to see how you are. But from my reckoning, I think you're spending about $2,000 a weekend. Yeah. We said what the estimate was for your rounds. And there's seven rounds, so that's $15,000 regarding the bike, you know, the bikes to one side and whatever else. So it's about an investment to be able to

turn all that investment around for you, you know, get the fun back, get you enjoying your riding, get you performing the way that you intend to perform and know that you can. next next Welcome. So it's the investments all on you, if you like, rather than on the kit around you, you know, and we also, I do recognize, I'm in the real world, that people don't have a mindset budget set aside. So what I tend to do is we work out a payment plan. We split it into chunks for people that, you know, that need to spread it out over a period of time. So we can talk about that on the next call. But price aside, do you feel like, and obviously, we'd have to work out how you do pay for it. But price aside, do you feel that that would be the 30 minutes a day would be something that you can put your investment of time into as well, so that you can be?
01:20:49 - Angela Brunson
Yes.
01:20:50 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah. Because I keep thinking of this as a bigger than just racing programming. Yeah. Yeah. Yeah.
01:21:00 - Angela Brunson
Like, if I thought about, well, I'm spending another five grand on race stuff, then it's, like, disheartening, especially where my racing is at the moment. But if it's $5,000 on a new way of thinking or, like, just a reset or a breakthrough of a plateau, then I, you know, you honestly can't put a price on that.
01:21:21 - Craig Muirhead (nsnconstructionnw@gmail.com)
No, no, exactly. And it does, everything cascades, everything. It's a ripple effect. If you feel better in your racing, guess what? Other parts of your life are better as well. And so, and equally, you know, I've got a lot of people that go, damn, Craig, I do that all day at work, but I've never applied it to my racing. Or I'm now taking what I've taken from the race weekend, I'm applying it to my work. So it does have an absolute crossover, you know, because life is full of challenges. Right. All a race weekend is under a magnifying glass, isn't it, really? Yeah.
01:21:55 - Angela Brunson
And, you know, so there's been the Monday after any marathon, you come into your office. And you're like, oh, that inbox is overflowing with work to do. But if I can run 26.2 miles, I can, you know, that's nothing.
01:22:09 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah, I do see a lot of the cross connections of like a hard event makes the rest of my life seem easier by comparison. Yeah, yeah, exactly. And when you've got tools as well, then those can also be, you know, applied into into other areas. So you literally are, are giving yourself the same, that same flick of the switch, you're applying in other parts of the of your life as well, you know, so, yeah, so we'll have a think about it. I'll finish some of the calls as well. And then we just need to look at trying to line up another call.
01:22:42 - Angela Brunson
Shall we book another call? Sure.
01:22:45 - Craig Muirhead (nsnconstructionnw@gmail.com)
And when is going to be good for you?
01:22:48 - Angela Brunson
Well, how far apart would you normally spread this call before the next one?
01:22:53 - Craig Muirhead (nsnconstructionnw@gmail.com)
Well, to be honest, I'd, I'd like to, to not go too far into next week. Um. The reason I'm back in the UK is because my mum died on New Year's Day, unfortunately. Oh, I'm so sorry. Well, thank you. It was expected, but you're never ready, are you? And so we've got quite a lot of... We've done the organizing this week, but obviously I'm coming back next week for the funeral. So if we

could do something either over the weekend or the very early part of next week, then that would be good for me.
01:23:27 - Angela Brunson
No, this weekend is great. I'm completely free, other than building the bike.
01:23:33 - Craig Muirhead (nsnconstructionnw@gmail.com)
Okay. I'm just looking at your time zone. I'll just set your time zone. You'll be Pacific time, aren't you?
01:23:48 - Angela Brunson
Yes.
01:23:50 - Craig Muirhead (nsnconstructionnw@gmail.com)
Okay, so... Could we do something... Could something... to somebody. So, which is only tomorrow. Is tomorrow okay for you?
01:24:05 - Angela Brunson
Yeah.
01:24:06 - Craig Muirhead (nsnconstructionnw@gmail.com)
Okay, let's have a quick look. And what I'll do is I'll send you the link, similar to the link that you used, to book this call. I'll send you a link that has, you know, I've already booked it for you, and then you get the confirmation for the link. So, I'm just trying to work out what that would be for you. I've just got to change it because it's actually blocked out. What time is it with you now?
01:24:49 - Angela Brunson
6 a.m.
01:24:50 - Craig Muirhead (nsnconstructionnw@gmail.com)
No. Yeah. You got up at 6 a.m. You should have messaged me. We could have made a time that's better for you than that.
01:24:57 - Angela Brunson
Oh, there was like the drop-down option. And, um, I have court stuff today. So once it's business hours, I am not in the mindset to have a meaningful conversation.
01:25:08 - Craig Muirhead (nsnconstructionnw@gmail.com)
You wanted to get it, get it done and out of the way. Yeah, I understand. Uh, okay. So, um, so it's, what is it here? It's, so that means that you are, my mind's gone blank, 6am and we're at 14. So you're, we're, you are, um, 12 hours.
01:25:31 - Angela Brunson
Yeah. No, it can't be eight, eight hours, isn't it? Yeah. That sounds right.
01:25:37 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah.
01:25:37 - Angela Brunson
Six to 14 is eight.
01:25:39 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yep. Yeah. Okay. So, um, so, um, let's make it a little bit better for you then.
01:25:51 - Angela Brunson
So like evening time for you would be more of like a mid time, midday for me.
01:25:56 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah. So how, how is 12 o'clock for you?
01:25:59 - Angela Brunson
Which. It be eight o'clock for me. Perfect.
01:26:02 - Craig Muirhead (nsnconstructionnw@gmail.com)
Yeah. Is that okay for you?
01:26:03 - Angela Brunson

Absolutely.
01:26:04 - Craig Muirhead (nsnconstructionnw@gmail.com)
Okay, great. I'll send you the links right after this. Okay. And then I'll get through the rest of the calls between then and then, and I'll have, you know, a better understanding of what space we've got as well. And then we can finalize everything. And obviously any questions that you do come up with, you can make a note of them. We'll cover them then as well.
01:26:29 - Angela Brunson
Okay. Well, sounds good.
01:26:30 - Craig Muirhead (nsnconstructionnw@gmail.com)
Thank you so much for your time today. Yeah. Sorry. It took so long.
01:26:33 - Angela Brunson
That was a long call. Sorry about that. it was fun. It was fun. was definitely better than trying to sleep and failing or working, so. Okay. Well, have a good rest of your day and we'll speak tomorrow. Thanks. Have a good night. Bye. See you then. Bye-bye.
